FOREST MANAGEMENT

TECNOVE

TECNOVE is a company founded and established in Herencia, Ciudad Real, that carries out its activity in different sectors. Its work and evolution are marked by quality, innovation and customer service.

Its main lines of business are:

Vehicles

Design, manufacture and maintenance of bodyworks and special vehicles

Containers

Design and manufacture of containers and shelters for all types of uses and activities

CSC | Catering · Services · Construction

Construction of modular facilities, maintenance, cleaning, catering, etc

Forestry management

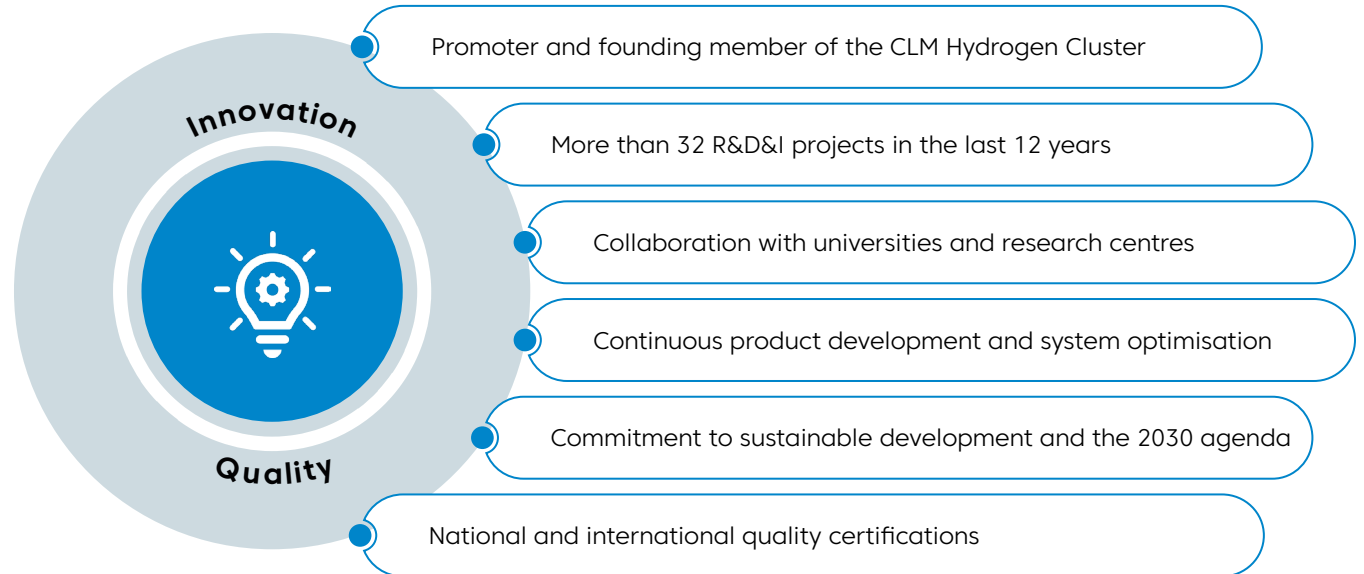

Advice and management of agricultural holdings. Forestry planning and operation

TECNOVE

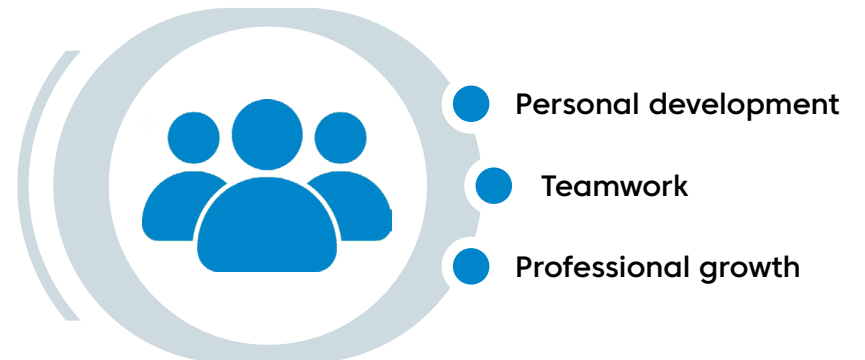

BUSINESS GROUP

TECNOVE is part of a trade group made up of 10 companies that carry out their activities together in the **TECNOVE Business Group**.

This adds to the business lines image and furniture solutions, telecommunications, energy and remarketing.

**People,
the epicentre
of our culture
and principles**

Forestry management solutions

We develop **sustainable forest management** through **research-based planning and management services** that assess and reduce the impact of our actions on the natural environment.

- We carry out a wide range of **forestry work** to ensure the correct management of mountains and forest lands.
- We take care of all aspects of forest **maintenance** and conservation, as well as the responsible use of natural resources.
- We conduct **training and outreach** events to help institutions achieve sustainable management of their forests.

Forestry works

Maintenance

Outreach & training

Forestry works

TECNOVE carries out responsible forest management and the research work necessary to **control and oversee the natural environment**.

In addition, the results obtained are useful for **planning the long-term management of the site**, ensuring optimal and sustainable development.

Forestry works

The forestry sector covers the following activities:

- **Stand planning and management** that ensures good forest stewardship and good space-time organisation of forest resources.
- **Technical plans** such as hunting planning, silviculture plans or resins exploitation.
- **Marking and cubing of timber** by selecting, marking and measuring the trees to be cut.
- **Defence of property** by means of studies, delimitation, cartographic updating, demarcation or surveys and stakeouts.
- **Signalling dasocratic** of forest lands and mountains.
- **Reforestation** based on the characteristic vegetation of the area, from the preparation of the land to its subsequent maintenance.

Maintenance

In order to carry out the **maintenance and conservation** of the natural environment, **TECNOVE** offers services of **works, maintenance and improvement of forestry infrastructures, exploitation and management of natural resources.**

Maintenance

TECNOVE offers the following maintenance and conservation services:

- **Silviculture report** including specific data on tree, shrub and herbaceous mass.
- **Forest inventory** of the main mass variables, such as basimetric area, number of feet or timber volume.
- **Construction and maintenance** of forest roads, water crossings, retaining walls, water troughs, shelters, enclosures, livestock pens and corrals or green areas, among many others.
- **Silviculture treatments** based on works that manage to maintain the forests in an optimal state. This work consists of clearing, pruning, re-vegetation and elimination of debris.

Outreach & training

TECNOVE offers **informative talks** to the various environmental agents with the aim of making them aware of understand the problems that exist on our forest and the best practices and solutions to tackle them.

We are committed to **training that provides the necessary skills and knowledge** to be able to carry out the various forestry operations in the most effective way.

Outreach & training

There are several types of training in forestry management, for example:

- **Sustainable forest management:** This type of training focuses on teaching techniques and practices to ensure the conservation of natural resources and sustainable timber production.
- **Silviculture:** Focused on learning about forest development and care, including forest species management, plantation design and forest management planning.
- **Biodiversity conservation:** The best practices for the maintenance of forest, including the management of endangered species and the creation of habitats for wildlife, are studied.
- **Forest inventory:** It is aimed to learning various techniques and tools of measuring and assessing forest resources, including the use of remote sensing technologies and data analysis.

Caring for our natural spaces

In **TECNOVE** we have successfully managed more than 300,000 hectares of forest land, thanks to such research work with the aim of analysing these impacts and predicting the final long-term outcome.
